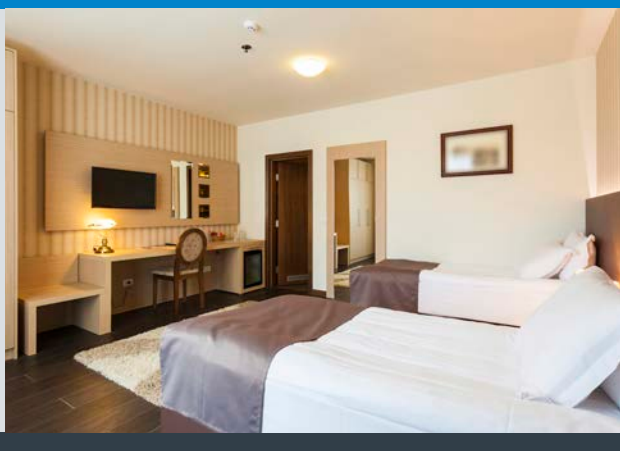
Hotel and Motel Fire Safety



Did you know?

Fire safety is important, even when you are away from home.

Keep your family safe by staying in hotels and motels that have hard-wired smoke alarms and an automatic fire sprinkler system in each guest room.

After you check in, you and your family should:

- Read the fire evacuation plan carefully.
- Find the two closest exits from your room.
- Count the number of doors between your room and the exits. This will help if you need to get out in the dark.
- Find the fire alarms on your floor.

Visit the Hotel-Motel List to find lodging for you and your family!
